Please read these instructions carefully before using this safety clothing. You should also consult your safety officer or immediate superior with regard to suitable garments for your specific work situation. Store these instructions carefully so that you can consult them at any time.

Refer to the garment label for detailed information on the corresponding standards. Only standards and icons that appear on both the garment and the user information below are applicable.

This garment is designed to comply with **AS/NZS 4602.1 High Visibility Garment Standard**. Garments are manufactured to AS/NZS 4602.1:2011 and are designed for use according to the garment classification.

Class D/N
garments are suitable for either day or night use.

Class N
garments are suitable for night use only
Class D
garments are suitable for day use only.

Limitations of Use

Under no circumstances should Class N garments be worn for protection during the day and Class D garments worn at night. Fluorescent materials are generally not effective when viewed indoors under artificial light. A dry-weather only garment should not be worn in wet-weather conditions.

Any markings or additions not incorporated into the original product may void the garments compliance with the appropriate standard and put the user at risk.

Maintenance

Refer to care instructions on sew-in label. Garments should be inspected on a regular basis and replaced if they are badly damaged, soiled or faded. In constant daytime use, fluorescent garments should be critically examined at 3 to 6 month intervals.

Available Size & Selection:

Fit according to correct chest and waist size, refer to size chart. These garments have built in allowance for comfort and to allow the garment to be worn over medium bulky clothing.

Storage

Garments should be stored away from direct sunlight.
Fibre Content Label:
Refer to garment label for corresponding content details.

Warning:

Where there is a hood, peripheral vision and hearing may be impaired.

Retroreflective tape and labels:

Retroreflective tape or labels should not be ironed! Please refer to the garment label for the number and wash cycles not the stated maximum number of cleaning cycles is not the factor related to the lifetime of the garment. The lifetime will also depend on usage, care storage, etc. Garments should be discarded when the protective qualities no longer apply eg. 1. Maximum number of washes is reached. 2. The material has been damaged either by fading or has been torn. 3. The reflective qualities of the tape have faded. 4. Garment is permanently soiled, cracked, burned or heavily abraded.

UPF

(Ultraviolet Protection Factor)

is the classification system used for sun protective clothing. All Portwest fabrics are independently tested and rated for UPF. Sun protective clothing is categorized according to its rated UPF as given in Table below.

UVR Protection Category	UPF Ratings
Good Protection	15,20
Very Good Protection	25,30,35
Excellent Protection	40,45,50,50+

This UPF rating is for the fabric and does not address the amount of protection which is afforded by the design of the article. The manipulations involved in garment manufacture such as stretching and sewing may lower the UPF of the material.

Articles which have been designed to cover the maximum area of the body are recommended.

The protection offered by this item may be lessened-

- at points where the fabric is in close contact with the skin such as across the shoulders;
- if the fabric is stretched;
- if the fabric is wet; and
- with time, due to the effects of normal wear.

Wash Care Labels: Refer to garment label for corresponding washing details.

Max temp 30°C, mild process

Max temp 40°C, mild process
