USER INFORMATION

EN

These garments are designed to provide protection against cold weather. However, always remember that no item of PPE can provide full protection and care must be taken when carrying out the risk-related activity. CAREFULLY READ THESE INSTRUCTIONS BEFORE USING THIS PRODUCT.

Refer to the product label for detailed information on the corresponding standards. Only standards and icons that appear on both the product and the user information below are applicable. All these products comply with the requirements of Regulation (EU 2016/425).

Resistance to Water Penetration. WP (optional) WP measures the opposition to the passage of water through the material from the outside.

Material and seams are tested for water penetration.

Water Vapour Resistance

This measures the fabric's unwillingness to let water vapour pass through. Water vapour resistance is measured on the combination of all layers of garments, except for under wear. To pass EN 342 the value needs to be less than 55 m2Pa/W

LIMITATIONS OF USE

Before use, be sure to close the garment properly, tighten cuffs and wastine for close fitting. The garment protects against cold weather, but note that it is not a guaranteed protection in all circumstances and conditions. Note that the protection will be impaired if the garment or wear becomes wet. Store garments in a dry and well-ventilated area for a maintained protection level. The garment should be cared for according to the instructions on the garment. For increased protection and prevention of local cooling, be sure to use appropriate protection for head, hands and feet (protection for these body parts are not included in EN342)

ISO 13688:2013 Protective Clothing

Size Labels

General Requirements This European Standard specifies general requirements for ergonomics, ageing, sizing, marking of protective clothing and for information supplied by the manufacturer.

A= Recommended height range of wearer

B= Recommended chest girth of wearer

C= Recommended waist girth of wearer

D= Recommended inside leg measurement of wearer

Garments certified according to EN342:2017:2017 are tested in combination with the standard under garment B (2 layers)

Y = Thermal insulation (Ider)
Y = Air permeability, AP, class 1-3, where 3 is best
Y = Resistance to water penetration class (1-2, where 2 is best); optional

Thermal Insulation

Ider, resultant effective thermal insulation, defines the thermal insulation from skin to outer clothing surface measured or calculated with a moving mannequin.

Air permeability, AP

AP measures the ease with which the air can pass through the material. It is a measure of how windproof the garment is.

Wash Care Labels: (Refer to garment label for corresponding washing details).

- Max temp 30°C, mild process
- Max temp 40°C, mild process
- Max temp 40°C, normal process
- Max temp 60°C, normal process
